*A very awesome book with perfect and lucid reasons. It really is basic but shocks within the 50 percent of the book. Its been designed in an exceptionally easy way and is particularly merely right after i finished reading this ebook where in fact changed me, change the way i think.

Not illustrated. 1900 Excerpt: . . . the argument of which lies between 0 and  $27r$ , then  $11 \log 11 11 \log t 4-1Zkiri$ , where  $h$  is a finite integer on account of the properties of the curve drawn through  $t$  from 0 to  $t_0$ . Now  $t^{2k7Tl}$  is small compared with  $11 \log t$  when  $i$  is small. Also  $11 \log t r (\log r)^2 6$  where  $t r$ ; that is, when  $r$  is very small,  $11 \log 11$  differs from  $r \log r$  by a quantity infinitesimal compared with its value; moreover, this value can be made smaller than any finite quantity, on sufficiently diminishing  $r$ . From the foregoing equation, it therefore follows that  $v \log t . . .$ , where the unexpressed parts are powers of  $t$ , of  $t \log t$ , and of combinations of their powers; the term retained is the most important term, for  $t \log t$  is the most important term. In particular, if we choose the branch  $\log$  of the logarithmic function, we have  $v \log t . . . \log t V$ , where  $V$  can be made less than any assignable finite quantity on sufficiently diminishing  $t$ , and is at the same time infinitesimally small compared with  $11 \log 11$ . To establish the first theorem in 70, it would be possible to pass from the equation  $t$  where  $x(v, t)$  is a regular function of  $v$  and  $t$ , to the more extended theorem dealing with the general character of  $v$  in a finite region...
