By Charles Edmund Simon

Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1896 edition. Excerpt: .found. This figure is then corrected for the total amount of urine. Hence the equations, I., $x = 15 - 2$; II., $1000: x:: A: Ch$, or in which Ch represents the quantity of chlorides contained in the total amount of urine, A the amount of urine actually passed, n the number of c.c. of the KSCN solution used in the precipitation of the excess of chlorides in 80 c.c. of the filtrate. $i 6.5 T = 7.05$. So in the above case $Ch = 600 1000$ The method described may be employed in the presence of albumin, albumoses, peptones, and sugar; the urine, however, must be fresh, so as to insure the absence of nitrous acid. Direct Method. If absolute accuracy is not required, the following method may be employed: Ten c.c. of urine are diluted with distilled water to 100 c.c. and treated with...
